Create an MVC Application for Leave Management. Employee can login to system to apply leave and view his leave details and Manager will be able to view all the pending leave and approve/reject the leave.

Create User, Leave Type and Leave table, insert records using insert query to User Table and Leave type table.

Table Name: User Table

Column Name	Description
User ID	auto generated numerical value
User Name	Name of the User
Password	Password of the user
Role	Role can be Manager or Employee

Table Name: Leave Type

Column Name	Description
Leave Type ID	Auto generated leave type id
Leave Type	Type of leave

Table Name: Leave

Column Name	Description
Leave ID	Auto generated leave id
User ID	User who applied leave
Leave Type ID	Related to Leave Type in leave table
No of days	No of days for which leave is required
Leave Reason	Reason entered by employee
Leave Status	'Pending' by default and changed to approved/Rejected by the manager.

Following task should be implemented in the application.

Login : User will login to the system using User Name and Password. Application should store the role of the user and store the user id of the logged-in user in session variable

Apply Leave: User can select leave type, enter number of days of leave, enter leave reason and leave will be saved in database with status as pending, leave id auto-generated, used id should be fetched from session

View Leave by User : User should be able to view the leave applied by him

View/Approve Leave Manager : View all the pending leave of all the user, leave should have option to approve or reject leave
